PROJECT E-QUAL

Concept Note

Learning and education, when thought of simultaneously and contemporaneously, make the education sector a cultural and systematic whole which flows through different matrices of the Institution. It essentially trickles down to being a complex network which connects communities and people to one another by prevailing as an independent need in all societies. The code of education comes with its own set of complexities which ultimately frames the manufacturing and output of the education system. A united heterogeneous mould of students is imperative. Establishment of encouraging peer environment that supports this mould of students should lead to a societal-wide educational ecology at the level of higher education. While access is limited within a spectrum, it is reasonable to question if the finished products of different modes of education (and the opportunities offered following it) pivot to an unremarkable similarity between the diversity of products (students). The prosthetics of the creation of these coinciding similarities and differences kindle us to enquire the existence of a transition in education - from a purely academic and technical norm to a way of constant holistic development of the future workforce - facilitated by governing bodies within and outside it. This is followed by the ever present question of the roles of these aforementioned bodies. Due to the existence of the wide network and the emergence of a subculture of education, these governing bodies are often accompanied by tributaries both in the private and the public sector. Ultimately, a new episode in the chapter of education is emerging in the 21st Century with constant commercialization.

The assembling of students through various processes of production and the streamlined output has unfurled as a complex system, crafted with care through the years. For the Fourth Project E-QUAL student conference, Shiv Nadar University invites engagement with education as a system, as an institution, as a network and as a practice.
