About the Department

Department of Design (DoD) was set-up with the mission of nurturing creative minds into outstanding design leaders, with a passion for creating a difference in society. It is grounded in the philosophy of Liberal Education and intends to offer programs that provide students with holistic interdisciplinary education along with specialisation in their specific areas of interest. Through its multidisciplinary, research-centric, innovation-driven, practice-oriented design curriculum, the Department aspires to become a centre of excellence in Design Education, Research, and Practice.

Design as an activity is considered fundamental to human beings. Every human being designs and everyone is a designer. However, as a professional field of study, it evolved since 1920s by transforming knowledge from various disciplines including art, craft, architecture, engineering, humanities, and social sciences etc. It is often considered an applied art, and science of using the design process in conceiving products, systems, services that are innovative, sustainable and satisfies users' need in specific and society at large.

Design is envisaged to play a critical role in elucidating many complex and multifaceted problems of the 21st Century. Taking cognizance of this fact, DoD offers programs which prepare students for the problems, needs, and applications relevant to 21st Century. Currently, the Department offers Master of Design (M. Des.) and Design Minor programs. In the near future, the department plans to introduce Undergraduate (B. Des.) and Doctoral (PhD) Programs in Design.

Master of Design Program

Master of Design (M. Des.) program at DoD is a two-year, full-time, practice-intensive program. In line with the philosophy of liberal education in design, the program is open to candidates from various disciplines. The program offers experiential-based learning in a liberal, multi-disciplinary, research-centric environment. It intends to provide students with holistic as well as in-depth knowledge of their specific areas of interest.

As the M. Des. program at SNU is expected to attract creative minds from various disciplines, first year of the program provide students with an overview of design, focusing on developing their basic skills, and knowledge essential for designing. The semester-long project in the 2nd semester helps in applying the learnt knowledge, and skills on a practical problem. Also, the 8-week long mandatory internship helps in understanding the practice of design in industry.

The second year of the program offers a year-long design research project and a set of electives which is to be chosen from a pool of electives covering different specialisations. A student may choose to be a specialist or a generalist designer based on the selection of electives from the same or different specialisations.

The maximum student intake for M.Des. Program is 20 per year.
